REALTIME BAND CONDITIONS WEB SITE <http://www.bandconditions.com>:

The purpose of this experimental Web site is to provide 24-7-365 actual (REALTIME) band condition information to CW QRpp, QRpe and CW/SSB for Contesters interested in increasing their scores. It can also be of benefit to other Radio Amateurs to determine band conditions for Nets and casual QSO's. This information is NOT based on any software predictions or any kind of satellite based readings. It is based on a new Ionospheric sounding method called "HF Ionospheric Interferometry" which operates very similarly to the PolSAR system used by NASA.

Unfortunately, I couldn't meet up with any Amateurs for courses or to learn the ropes (none on the island), so I just did the study thing. I decided that the Foundation license would be too limiting for a remote area, so I went straight to the Standard license (100W). I have purchased

a FT DX1200 which is still 6,000klms away.

Still working out the QSL thing, international mail from here is \$2.90 AUD and mail can take a while.

Updates on my progress to get online can be found at:
