We anticipate having our stations on 160-30 meters during night hours, and the hex beams for 20-6 meters during daylight hours. We hope to be able to provide Qs on 160 to EU to fill the great need for that band. Our operation is scheduled for February 18-28th, not the 24th as previously reported. REALTIME BAND CONDITIONS WEB SITE <http://www.bandconditions.com>:

The purpose of this experimental Web site is to provide 24-7-365 actual (REALTIME) band condition information to CW QRPP, QRPE and CW/SSB for Contesters interested in increasing their scores. It can also be of benefit to other Radio Amateurs to determine band conditions for Nets and casual QSO's. This information is NOT based on any software predictions or any kind of satellite based readings. It is based on a new Ionospheric sounding method called "HF Ionospheric Interferometry" which operates very similarly to the PolSAR system used by NASA.
