DAYLIGHT SAVING TIME (DST). Did you remember to change your clocks? Countries in the Northern Hemisphere (most of N. American and some of the Caribbean) who observe Daylight Saving Time should have changed their clocks on Sunday, March 11th at 2:00 AM, and should have moved their "local clocks" forward 1 hour to 3:00:00 AM local time. Daylight Saving Time will end on Sunday, November 4th at 2:00 AM. European countries will switch to DST on March 25th. For the history and details about DST, as well as an interesting map of the world (showing the countries who observe DST), see: http://en.wikipedia.org/wiki/Daylight_saving_time
<http://www.timeanddate.com/time/dst/2018.html>

ADDED NOTES: Hopefully, all amateur radio operators know not to change their GMT/UTC/ZULU clocks. However, since most operators usually set their computers to local time, some may have to change their settings on "some" ham radio software (ex. logging, propagation, DXTelnet, etc..) programs.

ED9, CEUTA AND MELILLA. Members of the Amateur Radio Union of Ceuta will be active as ED9E during the CQWW WPX SSB Contest (March 24-25th) as a Multi-Op entry. QSL via EA9ACD direct only.

FJ, ST. BARTHELEMY. Operators Rick/AI5P, Gregory/WOZA and Jim/WD0E will once again operate from Pointe Milou, St. Barthelemy Island (NA-146, Grid Square FK87), between October 17-26th. Activity will be on 80-10 meters using CW, SSB and RTTY, with satellite operations by WD0E. Conditions may largely limit most activity to 20 meters and down. Operating 160 meters is being considered, however, no antenna option is yet finalized. Satellite operation will take place on several satellites. A satellite and pass schedule will be announced on the AMSAT-bb in advance. Equipment includes three Elecraft K3's and two 500 watt Elecraft amps. Antennas include a SteppIR crank IR vertical for 80-10 meters, a folding hexbeam by Folding Antennas (Germany) on 20-10 meters, LPDA's on 20 and 17 meters and verticals on 30 and 40 meters. Operation will be as continuous as conditions warrant. The Colorado operators have decided to use FJ/N0KV as their callsign while AI5P will be active as FJ/AI5P. FJ/N0KV logs will be updated to LoTW while Rick's logs (FJ/AI5P) will not since he continues to be an analog guy with

an actual key and pen/paper log. Paper QSLs will be available from both N0KV and AI5P direct and via the Bureau. All U.S. addressees send SASE; addressees outside the US should send SAE plus 2 USDs for return postage. Use of ClubLog is not anticipated. Further information will be published as the trip approaches.

Further Satellite Info (by Jim/WD0E) [edited]: "For satellite operation, we plan to be on as many passes of as many satellites as possible focusing on the evening hours. Equipment will be an IC 910 and Arrow. On Montserrat in 2015, we were on FO-29 only. For St. Barts, we will also operate some FM satellites. We will assemble a pass plan before we go and post it to the AMSAT-bb. We will stick to that plan as much as possible, but of course conditions may cause us adjust on the fly. The operating location has good visibility to the horizon from about the NW through N and E to the SE. Other directions are somewhat obscured. QSLs handled as written above."

GB6, ENGLAND (Special Event/Press Release) [edited]. Radio stations from around the world will exchange greetings with GB6GEO over the airwaves at the English Riviera Global Geopark during the special communications week-end between June 9-10th. The special event station will transmit live from Kent's Cavern, Torquay, right in the heart of the English Riviera Global Geopark. Using a special event callsign GB6GEO will establish contact with other radio stations around Britain, Europe and the World from the English Riviera Geopark.

GB6GEO will also make contact with radio stations transmitting from within other Global Geoparks. There are other operators around the world using the GEO based callsign as part of the Geoparks Communication Week-end. GB6GEO will establish contact with some of these over the communications event weekend.

GeoparkCertificate -- For amateur radio stations/SWL's around the world who contacted/heard Geopark stations, the English Riviera Geopark is offering a special commemorative European Geoparks Network radio amateur certificate for contacts with GB6GEO (instant qualifier), or two Geopark stations excluding GB6GEO. (the award will also apply to SWL's on a heard basis). This certificate, is endorsed by our Queens husband H.R.H The Duke of Edinburgh, with his own words congratulating the holder. Certificates will cost UK£4 each, Europe €5 and rest of the world USDs7.

Alternatively certificate holders to be the first in their country to claim the certificate will have an 'FC' suffix following the certificate number. This denotes the first person in their country to claim the 'Geoparks' award. These certificate holders will be worth one point towards the basic certificate, that requires two points, or work any five (5) certificate holders.

Certificate Manager/ direct QSLs to Martin Foster, G3VOF, QTHR or QRZ.com. Please also see QRZ.com for the latest updates. Only log details necessary.

REALTIME BAND CONDITIONS WEB SITE <<http://www.bandconditions.com>>:

The purpose of this experimental Web site is to provide 24-7-365 actual (REALTIME) band condition information to CW QRPp, QRPe and CW/SSB for Contesters interested in increasing their scores. It can also be of benefit to other Radio Amateurs to determine band conditions for Nets and casual QSO's. This information is NOT based on any software predictions or any kind of satellite based readings. It is based on a new Ionospheric sounding method called "HF Ionospheric Interferometry" which operates very similarly to the PolSAR system used by NASA.
